Over 30% of our users are already benefiting from the many advantages available with Optosys®2.

Contact us to learn how you can, too! We'll be pleased to advise you on implanting Optosys®2 in your clinic.

Tips & Tricks

Quickly scheduling multiple appointments

Optosys®2 is capable of quickly scheduling multiple appointments that aren't patient-related. For example, you can rapidly schedule a time period to indicate an optometrist's absence during the holiday period.

Here's how to schedule a multiple appointment:

1. In the Agenda, select "Multiple reservations" from the Actions menu (reverse #1) or position your cursor in a free space, right-click with your mouse and select "Add Multiple Reservation" in the pop-up menu (reverse #2).
2. In the Multiple Reservations window select the company and user you are making the multiple appointments for. Next, select the dates, days and times, and enter a brief description. The description entered will identify the appointment (reverse #3).
3. Click on "OK" to complete the process. Voilà! Your multiple appointment has been created in the agenda (reverse #4).

It is also possible to delete one, some or all appointments in a multiple appointment with one operation.

Here's how to delete a multiple appointment:

1. Place your cursor on any of the appointments.
2. Right-click with your mouse and select "Delete Appointment" in the pop-up menu (reverse #5).
3. Select "This appointment only", "All future appointments of this group" or specify a period (reverse #6).
4. Click on "OK" to complete the process.
