JUNE 2011 | VOL 11 NO6

[PAPERLESS CLINIC – WHERE DO YOU START? - PART 1]

Some of you have shown some interest in becoming paperless but where do you start? What does it come down to? What are the advantages or inconveniences? What kind of tools do you need? How can Optosys®2 help? We will be publishing a series of articles dealing with this issue.

Where do you start?

At first, it is important to question one's own clinic's needs.

WHY do you want to become paperless?

- It's the latest trend.
- You want to be on the cutting edge of technology.
- To be environmentally friendly.
- Your office space is overcrowded.
- You want to centralize your information.

Do you want to become completely paperless or do you simply want to convert part of your business?

Are you willing to change some aspects of your internal processes?

Are you willing to change your work environment?

Even if these questions seem trivial, they express a clinic's needs and help determine at what level you are willing to invest your efforts.

[In our next issue of Optosys®Info, we will expand on the necessary implications to achieve such a goal.](#)

Should you have any questions, please don't hesitate to contact OSI's Technical Services at 514-762-1954 or toll free at 1-866-660-6797.
